Developed a 2D Game using C# as Scripts and Unity Game Engine as its IDE to present in school activities.

Online Buying of E-game Currencies System

Developed a Online Ordering using Django for its front-end and back-end, and SQLite for its database for thesis purposes.

Web Developer (WordPress)

Developed a Websites using WordPress for Its Front End and Back End, Using Avada themes, Plugins and Database for GcWebExperts.

WORK EXPERIENCE

GCWebExperts Internship

During my time as an intern, I was able to learn how to utilize Adobe Photoshop to create a mockup design. When designing a mockup there are things that need to be considered. At the same time, I could access Cpanel to create a new account for a client and a new database for them. Inside the Control Panel, I learnt how to install WordPress, Themes, Plugins, and so on. I learned how to develop WordPress websites and thus enhance my programming and website design skills.
